Final Office Action on the Merits

1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claim Rejections - 35 USC § 102

2. The rejection of claims 1-5 under 35 USC 102(b) over Mookherjee et al. ('098) is withdrawn.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mookherjee et al. ('098) and Kampf (DE 3003894) and Boshagen et al. ('242) in combination.

Mookherjee et al. teach the isomerization of 1 α -acetyl-2,6,6-trimethyl-3-cyclohexene in the presence of alcoholic base of alkali metal alcoholate (see col. 5, line 41-65; col. 18, lines 29-49).

Kampf teaches alkali alcoholates as isomerization catalysts and the use of polar solvents such as dimethylsulfoxide and dimethylacetamide at 0-150°C in said chemical reaction (see the entire article, especially attached English Abstract).

Boshagen et al. teach isomerization in the presence of an organic solvent such as lower alcohols, dimethylsulfoxide at temperature from 40-100°C (see col. 2, line 65 – col. 3, line 15).

Based on the combined teachings of the above cited prior art, utilizing other solvents such as dimethylsulfoxide and dimethylacetamide in an isomerization process such as that taught by Moorkherjee would have been obvious to one having ordinary skill in the art at the time of the invention. It would also be obvious to the skilled artisan that the solvent utilized would determine the temperature at which the reaction occurs. The motivation to utilize various solvents and temperatures would be based on the desire to find optimum conditions for the isomerization of 1 α -acetyl-2,6,6-trimethyl-3-cyclohexene.

Conclusion

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within

Art Unit: 1616

TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
